

KIWI COMMUNICATIONS Announces SypherMedia International to Provide Security Technology for New DTH Service

Westminster, CA – June 13, 2017 – KIWI COMMUNICATIONS (stylized as KIWISAT) and SypherMedia International (SMI) announced today that SMI will provide its SypherShield Technology™ (SST™) and SypherSignature Programming™ (AKA BlackBox Provisioning) to secure KIWISAT direct to home satellite service. KIWISAT will launch its new DTH service in the Caribbean region in Q4 of 2017.

“SMI is very pleased to be selected by KIWISAT. Having our security technology incorporated in the majority of SoC vendor product lines and having worked with many of the leading Set Top Box providers allowed KIWISAT to select the vendors of their choice knowing SMI had the experience to help integrate the essential security technology to match KIWISAT’s aggressive schedule”, said Dennis Flaharty President of SMI.

“SMI was the perfect match for KIWISAT. Their experience in DTH security and solid recommendations from SoC vendors made our selection easy”, said Andrew Wang President KIWI COMMUNICATIONS.

About KIWI COMMUNICATIONS:

Located in Saint Martin KIWISAT is a French direct broadcast satellite service provider. Its satellite service transmits digital satellite television and audio to households in the Caribbean. KIWISAT has announced its plans to launch a Direct to Home satellite service in Q4 of 2017. The company Mission: To give everyone high quality, reliable and affordable satellite TV services.

About SypherMedia International:

SypherMedia International (SMI) is a security technology company specializing in cutting edge technology to develop comprehensive security solutions for your customers. Security solutions developed by SMI protect tens of billions of dollars of commerce annually.

SMI develops and licenses innovative security technologies in the fields of reverse engineering protection, anti-cloning protection, secure BlackBox programming and Key Management Systems, network security solutions, and a range of Pay TV and content protection products. In addition to these products and services SMI offers security evaluations at the silicon level, system level including software vulnerabilities of customer’s products and third-party products our customer wish to assess. SMI’s customers include many of the world’s leading consumer products manufacturers, Pay TV security companies, Broadcasters and chip manufacturers.

SMI was founded in 2003 by executives and senior engineers from DIRECTV Engineering who pioneered Pay TV security.
